### **1. Policy statement**

d'Overbroeck's is committed to ensuring that all students with medical needs are appropriately supported and that medicines are managed safely, effectively, and in accordance with current legislation and statutory guidance.

This policy applies to all staff and students involved in the administration, storage, and supervision of medicines.

The school will comply with all relevant legislation and guidance, including:

- Supporting students with medical conditions at school (DfE statutory guidance; current guidance remains in force as at August 2026)
- Allergy safety in schools (DfE, 2026) and relevant allergy/anaphylaxis guidance; for an independent school, this should be treated as current good practice and monitored for forthcoming regulatory requirements
- National Minimum Standards for boarding schools (DfE, current May 2026 edition)
- Applicable UK medicines legislation and relevant professional guidance, including Royal Pharmaceutical Society/Royal College of Nursing guidance where appropriate
- Current clinical guidance and locally agreed healthcare protocols

All medical information is processed in accordance with the UK GDPR and Data Protection Act 2018. Access is restricted to authorised staff only.

### **2. Aims and Objectives**

We aim to ensure safe and effective management of medicines by:

- Establishing clear procedures for:
  - Prescribed medication
  - Non-prescribed medication
  - Maintenance medication
  - Emergency medication
- Providing clear guidance to staff
- Ensuring sufficient trained personnel are available

- Communicating procedures effectively to staff, students, and parents
- Reviewing this policy regularly or following significant changes

### 3. Administration of medicines

#### 3.1 Responsibility

- The administration of medicines is the overall responsibility of the parents.
- The Principal and appointed staff are responsible for ensuring students are supported with their medical needs while on site and this may include managing medicines where appropriate and agreed with parents. Medication is administered by the Nursing Team or by other staff who have completed medication administration training (eg, Boarding staff and Reception staff). Medication administration will be updated every 3 years.
- It is school policy to manage **prescribed medicines** (eg, antibiotic, inhaler, etc.) where appropriate following consultation and agreement with, and written consent from the parents (**APPENDIX 1: Medication Administration and Parent Consent Form**).
- It is our general policy not to take responsibility for the administration of **non-prescribed medicines** to day students as this responsibility rests with the parents/guardians. On occasions when students require over the counter medication the following medication can be given, providing that written consent from the parents has been received in advance: Paracetamol, Ibuprofen, Strepsils, Cetirizine (antihistamine), Cough syrup, Bisodol, Buscopan, Difflam mouthwash, Rehydration treatment. Consent can be found on ISAMS.
- It is our policy that boarding students should not be given any over the counter medication apart from Paracetamol, Ibuprofen, Strepsils, Cetirizine (antihistamine), Cough syrup, Bisodol, Buscopan, Difflam mouth wash and rehydration treatment only if parental consent for each individual medication has been given. Parental consent is recorded on ISAMS.

The only situation where a Boarding student may be allowed to use another over the counter medication is if they have been unable to get a GP appointment within 48 hours and the School Nurse has advised it as an appropriate step. In each case, students must inform their Boarding House and the School Nurse of the medication purchased; updates will be put on CPOMS.

- It is our policy to manage the administration of **maintenance drugs** (eg, insulin), as appropriate and following consultation and agreement with, and written consent from the parents. On such occasions, a individual health care plan will be written for the students concerned.
- It is our policy to manage the administration of **emergency medicines** (eg, Adrenaline). In all cases, professional training and guidance will be received before commitment to such administration is accepted.

#### 3.2 Procedure for staff with training in the administration of medicines

- a) Confirm the student's identity – ask their name.
- b) Check on ISAMS for parental consent, with particular attention to any drug allergies or interactions reported by parents.

- c) In the case of 'as required' medication, check when the student last had a dose of the drug. Accurate record keeping and communication should prevent over-frequent use of medication.
- d) Medication can only be dispensed from Medication in its original packaging and be checked by nursing team. If medication has been brought to the school from abroad there must be an English translation by the manufacturer on the packaging or in the manufacturers enclosed information leaflet.
- e) Select the correct medicine container, and check the name of the drug, the dose and the expiry date. If the packaging or the medication is damaged, or if the label is not legible, it may be inappropriate to administer the drug, and an alternative should be sourced. Students should be offered medicines in a suitable form: tablets, liquid.
- f) Prepare the dose and administer. Students must be offered a glass of water to aid in swallowing. Ensure the whole dose is swallowed. Medicines should not be handled and should be prepared using a 'clean' technique – pushing the tablet from the blister pack into students hand or medicine pot. The medication must be ingested in front of the member of staff.
- g) Record the administration of the medication on ISAMS immediately in the correct documentation.
- h) In the case of prescribed medicines, note the administration of the medication on the student's personalised Prescription Record Sheet (**APPENDIX 2**). A note may be added to CPOMS if appropriate (to alert other members of staff to illness/symptoms). This should be used if students get a prescription from a pharmacy or GP out of nursing team hours.
- i) Medicines taken from the container but not used should not be replaced.

### 3.3 Procedure for administering controlled drugs

Controlled drugs must be stored in a double locked drugs cupboard. There must be two different keys which should not be stored together.

- a) The drug should be removed from the safe and the pharmacy label checked to confirm the drug, dose and student name.
- b) Two members of staff should verify the quantity of the drug against the running balance total in the Controlled Drugs register
- c) The correct dose will be administered to the student as per drug administration procedure above.
- d) Details of date, student name and dose should be entered in the Controlled Drugs register and the entry signed (not initialed) by the two members of staff.
- e) The medicine administration should be entered on ISAMS immediately.
- f) The controlled drugs stock must be checked monthly by two members of staff and recorded in the control drugs register.

### 3.4 Invasive treatment

If a student is prescribed medication in the form of a suppository, pessary or injection it should be administered by the Practice Nurse at the GP Surgery.

### 3.5 Refusal

Should a student refuse a prescribed dose of medication the nursing team need to will be notified, and they will then discuss with the student the reasons for refusal. If the student still refuses to take the dose the parent/guardian should be notified. A written report will be recorded in CPOMS.

### 3.6 Adverse reaction

When a student is receiving medication that is new to them, eg, a course of antibiotics, staff must be aware of the possibility of adverse reactions and should check the Patient Information Leaflet for details. If there is, or if staff suspect there is, an adverse reaction, the treatment must be stopped and the prescribing doctor (or out of hours service) notified. If necessary, emergency treatment will be commenced. A incident report will be completed on sphaera and documented on Isams

### 3.7 Errors of administration

Errors of administration include miscalculating a dose, omitting a dose or repeating a dose. If an error occurs the following procedure should ensue:

- urgent medical advice is sought if required (eg, GP on call service or 111);
- the Nursing team should be notified immediately;
- any appropriate treatment commenced;
- a full report should be made in CPOMS and an accident form completed on Sphaera;
- the student and parents/guardians will be notified.

### 3.8 Inhalers

Inhalers are supplied by parents (or via the GP for boarders). An inhaler prescribed for one student should not be used for another. All inhalers must be labelled with the student's name and be in date. The School Nurse is happy to assist in checking a student's inhaler technique to ensure that the correct dose is delivered. Where a spacer device is required, this will be kept with the inhaler. All students with Asthma will have Asthma care plan which is reviewed annually with student and parents

- All students must carry a named inhaler with them at all times.
- All boarders must have a second named inhaler kept in their boarding house (or given to their host family). These will remain accessible when students are in boarding. The Head of House will be responsible for monitoring expiry dates.
- **Emergency inhalers:** Under updated regulations 2014 schools are permitted to hold an un-prescribed inhaler for use by students who have mislaid or broken their own inhaler. These inhalers are stored securely and contain a list of students with asthma, a Salbutamol inhaler, a spacer device, and instructions for use. They are stored as follows:
  - Senior School – reception
  - Sixth Form – reception
  - Milford Arts Centre – on ground floor first aid station
  - All boarding houses – in first aid station

Emergency inhalers are not allowed off school property. Students must take their own named inhaler for school trips or sports fixtures off site. Staff accompanying the student must check that students have their medication on them

### 3.9 **Adrenaline Auto-Injectors (AAIs)**

Students at risk of anaphylaxis should have two prescribed adrenaline auto-injectors (AAIs) available to them at all times. Their AAIs should be clearly labelled with the student's name and kept in an accessible location so that they can be administered without delay in an emergency.

Students should carry their prescribed AAIs with them whenever possible. Where this is not appropriate because of the student's age, individual needs or other circumstances, the AAIs must nevertheless be readily and immediately accessible to the student and the staff responsible for them. Staff must follow students Allergy Care plan

A student's prescribed AAI must not be replaced by a school's emergency or spare AAI. Emergency AAIs are intended as a back-up where a student's own prescribed AAI is unavailable or cannot be administered correctly without delay.

The school may hold spare/emergency AAIs for use in accordance with current government guidance. These AAIs must be stored in pairs, in clearly identified emergency AAI kits, in locations that are readily accessible and known to All staff.

An emergency AAI may be administered in accordance with the school's allergy safety procedures and the relevant medical authorisation and parental consent. A record must be maintained of students who have the necessary arrangements in place and of every administration of an emergency AAI.

If anaphylaxis is suspected, the appropriate AAI should be administered without delay in accordance with the manufacturer's instructions and the student's individual healthcare/allergy plan. 999 must be called immediately after administration of adrenaline, even if the student appears to recover.

A second dose may be required if there is no improvement after the first dose or if symptoms return, in accordance with the relevant clinical guidance and the instructions provided with the AAI. If a second dose is administered, the emergency services must be informed.

All boarders who have been prescribed AAIs must have a second named set available in their boarding house, or with their host family where applicable. These AAIs must remain readily accessible while the student is boarding. The Head of House, or another designated member of staff, will be responsible for ensuring that these AAIs are in date, appropriately stored and available for use.

Emergency AAIs are stored at:

- Senior School – reception
- Sixth Form – reception
- Milford Arts Centre – first aid station
- Cohen Hall
- All boarding houses – first aid station

The locations of emergency AAI kits will be communicated to relevant staff and reviewed regularly to ensure that AAIs can be accessed rapidly when required.

Further information is in the school's Allergy policy, available from the [website](#).

### 3.10 Supply, storage and care of the emergency anaphylaxis kit

- The kits are maintained via the Health and Safety audits on each site in liaison with the Nursing team for replacements.
- The emergency anaphylaxis kit will be stored centrally and securely in Reception in each school site.
- The kit(s) are not located more than 5 minutes away from where they may be needed.
- The emergency anaphylaxis kit will include:
  - An adrenaline auto-injector (300 micrograms).
  - Instructions on how to use AAI(s);
  - Information leaflet;
  - An emergency anaphylaxis kit monitoring log (checklist of expiry date/batch number and kit location);
  - A list of students to whom the AAI can be administered. Each kit will have a list of specific students for whom it can be used;
- The emergency anaphylaxis kit **must not be locked away**.
- The emergency anaphylaxis kit must be stored below 25°C and protected from extremes in temperature and direct sunlight (do not store close to radiators).
- The emergency anaphylaxis kit must be stored separately from the student's own AAI, which might be stored nearby.
- On a weekly basis, one of the nominated members of staff must ensure the emergency anaphylaxis kit(s) is present, in date and located in its designated place in Reception. If the AAI is nearing its expiry date a replacement should be ordered 2-month rule for expiry.
- Replacement adrenaline auto-injectors must be obtained when expiry dates approach.
- Emergency anaphylaxis kits are not allowed off school property. Students must provide their own named AAI for school trips or sports fixtures off site. Staff must check that students have their medication on

### 3.11 Disposal of the adrenaline auto-injector (AAI)

Expired AAIs must be returned to a pharmacy for destruction. The School Nurse will facilitate this.

## 4. Self-administration

A boarding student's ability to self-medicate both prescribed medicine and homely remedies will be assessed by the School Nurse (see Risk Assessment in **APPENDIX 5** and Parent Consent Form in **APPENDIX 6**). For residential boarders, the consent form will also be signed by the Head of House. For boarders living in Host Families, the Head of Non-Residential Boarding will inform the Host Family. Following the assessment, the student will sign the Self-Administration Guidelines to Students to confirm they understand how to store and take their medication (see **APPENDIX 3**).

The following categories of medication may be suitable for self-administration:

- Regular long-term prescriptions, eg, for the control of epilepsy
- Insulin
- Preventative asthma inhalers
- Topical lotions and ointments for skin conditions
- Antibiotics
- Regular antihistamines for hay fever
- Antimalarial medication

Any medication (with the exception of relieving asthma inhalers and adrenaline auto-injectors) should not be kept by students.

Students who self-administer medication should meet the following criteria:

- a) The student **must be aged 16** or over (an exception may occasionally be made by the Lead Nurse and the safeguarding team, in the case of a student under 16 years who is deemed competent to understand the implication of self-medicating, the medication prescribed, and where there are particular reasons why self-medication is more appropriate than having the medication administered by a member of staff).
- b) **Either** the medication should be prescribed by a UK medical practitioner and must be in a correctly labelled container dispensed from a UK pharmacy.  
  
**Or**, if the medication is from overseas, the student should provide a copy of the original prescription if possible (with an English translation if necessary). The medicine should be in a correctly labelled container dispensed by a pharmacist.
- c) The student must hand in their medication to boarding staff to be stored in a lockable cupboard. The student should then inform the boarding staff when they need to take their medication so that the boarding staff can open the cupboard for them and then lock away any the medication after administration.
- d) If a student has permission to self-medicate, they may store their medication in the safe in their Boarding House bedroom. If medication is found out in their room, the student will receive one warning. For a second occurrence, the student's right to self-medication will be suspended for one month and they will meet with the Nursing Team . If a student is also found to have medication in their room that has not been declared to Boarding staff, the student's right to self-medication will be removed.
- e) The appropriate documentation must be completed (see Student's Self-Medication form in **APPENDIX 4** and Self-Medication Administration and Parent Consent Form in **APPENDIX 6**).

Wherever possible, day students should take prescribed medication under the supervision of parents or guardians at home. If it is necessary for a day student to take medication while in school, the student's ability to self-medicate prescribed medicine will be assessed by the School Nurse and the student's parent/guardian. If agreed with parents and School Nurse, day students may carry a small quantity of medication on their person for administration as per the prescription.

Parents/Guardians must fill in a Self-Medication Consent Form (**APPENDIX 6**). The student must inform school staff when they have self-administered medication so iSAMS can be updated.

## 5. Educational visits and off-site activities

Students with asthma and severe allergies should have the appropriate medical device (eg, inhaler, adrenaline auto-injector) in an easily accessible place. d'Overbroeck's students will carry their own device as the school's emergency devices are not allowed to be used offsite. This should be noted in the risk assessment.

For students taking a course of medication the teacher in charge must have written information from the parent, guardian or nursing team detailing the name of the drug, dose and frequency. Sufficient medication must be provided for the duration of the visit.

Medication must be safely and securely stored for the duration of the visit. Responsibility and supervision of medication must be determined before the visit commences.

## 6. Storage of medicines

- Key security is integral to the security of medicines. Keys should be retained by the authorised person in a secure place. Keys for medicine storage should not be part of the master key system. Duplication of keys should be kept to the minimum necessary to allow efficient administration of medication.
- **KEYS FOR MEDICINE STORAGE MUST NEVER BE GIVEN TO A STUDENT OR ANOTHER MEMBER OF STAFF WITHOUT CONFIRMATION FROM THE NURSING TEAM THAT THE STAFF MEMBER IS TRAINED.**
- Controlled drugs should be stored in a locked cupboard within a locked cupboard. The two keys should not be held together.
- All medication is supplied with a Product Information Leaflet which gives information on appropriate storage. Medicines need to be stored safely to prevent damage by inappropriate temperatures or dampness.
- Medicines may be stored only in lockable immovable cupboards which have been assessed as suitable by the School Nurse, following advice from a pharmacist if necessary. Each teaching site has its own storage, as do the Boarding Houses.
- Only medicines may be stored in a medicines cupboard; it is not suitable to store other items in the same cupboard as medication. Shelf height must be adequate for bottles to be stored upright. Medicines/preparations for internal use should be stored separately (ie, on a separate shelf) from those for external use.
- Only medicines in current use should be stored. Out of date or discontinued medications should be disposed of using the procedure outlined in Section 7 below.
- Prescribed medicines for students should be stored separately from stock homely remedies, ie, on a different shelf in the cupboard and clearly labelled with the student's name.
- All medicines are stored in the original container as supplied. Staff must not tamper with packs of medicine, ie, decanting from one container to another for purposes of storage.
- **Refrigeration.** Some medication needs to be kept at low temperature. At the Senior School and Sixth Form this generally involves storage of oral liquid antibiotics and the temperature regulation is similar to that of a domestic refrigerator.
  - There is a refrigerator in both nurses' offices on school sites solely for the storage of drugs. Additional preparations, such as eye drops and vaccinations, may be kept here.

The temperature needs to be maintained between 2 - 8°C and it is checked and recorded daily.

- In Boarding Houses medication needing refrigeration is usually oral liquid antibiotics and should be kept in a refrigerator to which students do not have general access, for example in the Head of House flat, in which case the drug should be in a sealed container (such as a 'Tupperware' box) to prevent contamination by foodstuffs. If larger quantities are to be held, eg, insulin, the balance of the stock may be kept in a Nurse's office.
- **Staff Medication.** Staff medication must be stored away out of the reach of students.

## 7. Disposal of medicines

It is not the responsibility of the staff at d'Overbroeck's to dispose of medicines. It is the responsibility of the parents/guardians to ensure that all medicines no longer required, including those which are past their expiry date, are returned to a pharmacy for safe disposal. For this purpose, at the end of each academic year the school will liaise with parents/guardians about any unused medication, to ensure its safe return or disposal.

If student medication is left in a boarding house at the end of an academic year the school retains it as stock (if appropriate and within date) or takes it to a pharmacy for disposal.

Only the nursing team may arrange disposal of expired medication.

Sharps boxes will **always** be used for the disposal of needles. Collection and disposal of the boxes is arranged via the nursing team.

\*

## MEDICATION ADMINISTRATION AND PARENT CONSENT FORM

Student's Name: .....

Date of Birth: ..... Year Group: .....

To be completed by Parent:

|                                                 |  |
|-------------------------------------------------|--|
| <b>Name of medication</b>                       |  |
| <b>Preparation supplied eg tablet, ointment</b> |  |
| <b>Dose</b>                                     |  |
| <b>Frequency</b>                                |  |
| <b>Date medication commenced</b>                |  |
| <b>Date medication completed</b>                |  |

I give permission for the above named medication to be given to my child as prescribed.

Parent signature: ..... Date: .....

Staff safety check – staff member to initial by each number below to confirm they have checked:

1. Child resistant container?
2. Pharmacy label and physical direction for use?
3. Name of child on container?
4. Current date on container?
5. Expiration date checked?
6. Name and phone number of licensed health professional who order medication on container?

## PRESCRIPTION RECORD SHEET

**Record of an individual student's drug administration for PRN (Prescription Required as Needed) (when required) doses only.**

Student name: .....

Name and strength of drug: .....

(only one drug/strength must be recorded per sheet)

A member of staff responsible for medication administration (as above) must complete this form when further supplies are **received from pharmacy or if short term medication is approved by the nursing team.**

When form is completed it must be scanned back to the nursing team.

| Date supply received from chemist | Quantity received | Date and time of administration | Dose given | Number of tablets remaining | Signature |
|-----------------------------------|-------------------|---------------------------------|------------|-----------------------------|-----------|
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |
|                                   |                   |                                 |            |                             |           |

## SELF MEDICATION GUIDELINES FOR STUDENTS

Since you have been assessed, please remember the following guidance to ensure your safe administration of medicine.

This is also a proactive and positive way of learning to manage your health for the future.

1. When not on your person, your medication must be kept in the safe in your room and remain locked.
2. Please ensure you take medication as prescribed; at the correct time and as stated on the prescription label.
3. You need to show your medication to the Boarding Staff once per week to check the current number of medications taken, check expiry date and remaining supply. If there have been any omissions, problems taking or concerns, the School Nurse will be informed. If the medication is low in stock, you can be supported to request a repeat prescription from the GP.

Please note that you may not be able to continue to self-medicate if there is poor compliance. If you feel that you need further advice and support at any point, please see the School Nurse.

### Declaration:

- I have read and understood the risk assessment and understand what to do if I have any worries or feel I have made a mistake.
- I agree I will administer my medication and assume responsibility as outlined in this document.

Student's name (in capital letters): .....

Signed (student): ..... Date .....

School Nurse: I agree that this student is fully competent to administer their own medication.

Signed (School Nurse): ..... Date .....

## STUDENT'S SELF MEDICATION FORM

(for boarding house files)

|                        |             |
|------------------------|-------------|
| <b>Student name:</b>   |             |
| <b>Boarding House:</b> | <b>DOB:</b> |

|                                                      |  |
|------------------------------------------------------|--|
| <b>Name and strength of medication</b>               |  |
| <b>Preparation supplied</b><br>eg, tablets, ointment |  |
| <b>Dose</b>                                          |  |
| <b>Frequency</b>                                     |  |
| <b>Date commenced</b>                                |  |
| <b>Date completed</b>                                |  |

|                                 |          |
|---------------------------------|----------|
| Medication seen by School Nurse | Yes / No |
|---------------------------------|----------|

- I confirm that the School Nurse has explained to me the nature of the medication that I have been prescribed, and the risks of either missing a dose, or taking a dose too many.
- I confirm that I will take the medication as prescribed by the doctor.
- I will inform the boarding staff or School Nurse of any problems or potential side-effects that I may experience, especially if I am unable to take a prescribed dose.
- I will complete the course of treatment.
- I will hand in my medication to be stored safely, in a lockable place and will inform boarding staff when I need access to my medication, or I will keep it in the safe in my room.
- If medication is found on the side the student will receive a warning. If found again out in their room, then self-medication right may be suspended.
- I am aware that the School Nurse will carry out random checks to ensure that I am taking my medication as prescribed.

**RISK ASSESSMENT FOR SELF-ADMINISTRATION OF MEDICATION**

(used for Gillick and Fraser competencies)

Student Name: ..... Year Group: .....

Date of Birth: ..... Boarding House: .....

| Administration Query                                                                 | Yes / No /<br>N/A | Comments |
|--------------------------------------------------------------------------------------|-------------------|----------|
| Has self-administration been explained?                                              |                   |          |
| Will the student want to / be able to obtain own supplies?                           |                   |          |
| Does the student understand the requirement to store the medicines safely?           |                   |          |
| Does the student understand what their medication is for and how it should be taken? |                   |          |
| Can the student demonstrate an understanding of:                                     |                   |          |
| 1. The name of the medicine                                                          |                   |          |
| 2. The purpose of the medicine                                                       |                   |          |
| 3. Dose and frequency                                                                |                   |          |
| 4. When and how often to take 'prn' medicine and what the maximum dose is?           |                   |          |

*Continued overleaf ...*

## SELF-MEDICATION ADMINISTRATION AND PARENT CONSENT FORM

Student Name: .....

Date of Birth: ..... Year Group: .....

To be completed by Parent:

|                                                        |  |
|--------------------------------------------------------|--|
| <b>Name of medication</b>                              |  |
| <b>Preparation supplied<br/>eg, , tablet, ointment</b> |  |
| <b>Dose</b>                                            |  |
| <b>Frequency</b>                                       |  |
| <b>Date medication commenced</b>                       |  |
| <b>Date medication completed</b>                       |  |

I give permission for my child to carry and administer the above medication when needed. I confirm that my child understands the reason for this medication and when they should self-administer this medication.

My child is aware that when they take this medication they should inform the school reception staff, School Nurse or their DoS, so that it can be recorded on the school's database.
